Purpose of this screen is to selected data entered by various persons as forecast entry or from RAMCO sales order . This screen will be used by planning Department for selecting sorts for planning for a month.

Action :

- Sort Selection :

User can fetch the records from order location tag (RAMCO/ FORCAST) as per the selecting other parameter's available on the screen.
RAMCO entries come from the Sales Order module & the FORCAST entries come from entry made in Forecast Entry screen for that month.

On Fetch button system shows records under Sort Selection tag, here user can select/unselect the records for planning on the basis of these selection sort wise record summery will be shown under Sort Summery tag.

Pl. also note that if we save the selected records first time then system generate 0 (zero) revision no .

- Revision Generation :

If required, user can generate multiple revision no depending upon changes suggested & can re -work on revision no . Before generating/saving new revision no user must supply remarks which shows reason for creating a revision no (select remark from Revision Remarks tag) .

Plant : Select the Plant location (Cotton / Tafetta).

YearMonth : Select the yr month which planning is to be done.

Order Location : Select the order location from where orders is to be selected.

Revision No : This is shows you the different revision no which is generated for that month
You can select it accordingly.

Sale Person : This tag shows you the sales person list , you can select it All/ individual, so that data will be fetched accordingly.

Revision Remarks : This will be shown in case of Revision Generation selection under tag Action, revision no will be created with the selection of remarks.

By using above steps sort selection will be finalized & you can process for Final Plan.
